Activate and hang your clocks

Don't activate the battery or apply power to the clocks until the system controller is installed and transmitting and the clock is in the intended location.

Activation Note: Clocks should be installed within 24 hours of installing the system controller. After 24 hours, the system controller will enter Quiet Mode. Pressing 3-5-7 on the keypad will disable Quiet Mode for 6 hours. Reference Appendix J in the SiteSync IQ Installation and Operation Manual for more details on Quiet Mode.

Battery Analog Clocks

to 7 minutes.

- Take the clock to the area where it will be used.
- of battery pack to wireless receiver. The LED on the back of the clock will flash red within 30 seconds of power-up to indicate receiver is looking for the wireless signal.

 When the signal is received, the LED will flash green. Be patient. The clock hands will rapid

advance to the correct time. This may take up

2. To activate the clock, connect barrel jack plug

3. Hang the clock after hands are rapid advancing.

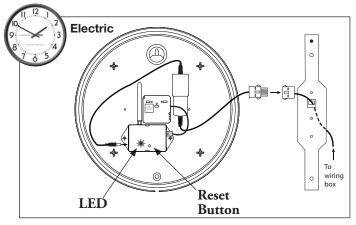

Note: If the LED does not flash within 30 seconds, remove the barrel jack plug of the battery pack from the wireless receiver for 5 seconds and reconnect it. This resets the receiver. The LED will begin flashing within 30 seconds.

Electric (AC) Analog Clocks

- 1. Take the clock to the area where it will be used.
- To activate the clock, connect to AC power.
 The LED on the back of the clock (see below) will flash red within 30 seconds of power-up to indicate receiver is looking for the wireless signal.
 - When the signal is received, the LED will flash green. Be patient. The clock hands will rapid advance to the correct time. This may take up to 7 minutes.
- 3. Hang the clock once signal reception is verified and clock is operating correctly.

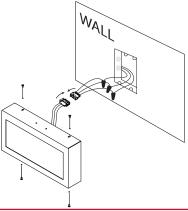

Note: If the LED does not flash within 30 seconds, disconnect the barrel plug on the clock receiver, wait 10 seconds and reconnect. The LED will begin flashing within 30 seconds.

American Series Digital Clocks

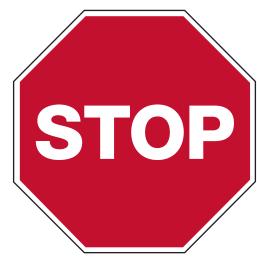

- 1. Take the clock to the area where it will be used.
- 2. To activate the clock, connect to 120vac power.
- 3. Display will flash "U40" or 1:00 o'clock until it receives a signal.

4. Verify synchronization takes place within 2-5 minutes.

Your SiteSync IQ system is now set up for proper operation. For information on other features, see the Installation and Operation Manual that was included with your system. If you have any questions, please contact Technical Support at American Time: 800-328-8996.

SiteSync IQ® Wireless Clock System GPS Plus with Magnetic Mount TX Antenna

Please read this first!

After determining the proper wattage for your facility, we guarantee the coverage of your SiteSync IQ when you follow a few simple steps. If this is your first installation or you have questions at any time during this process, please call American Time toll free at **800-328-8996**.

We're here to help!

This Quick Start Guide will help you avoid three common installation mistakes:

- 1. Improper location of transmitting (TX) antenna. A temporary install of the system controller is recommended.
 - Don't drill holes for permanent installation and mounting until the system is working correctly.
- 2. Improper system controller start-up. A successful transmission is indicated by a TX in the lower right-hand corner of the system controller screen.
 - Don't locate the magnetic mount TX antenna within 4' of the system controller.
- 3. Improper clock start-up. Activate clocks in their intended location.

Don't activate the clocks in one room and move them to another location as signal reception will not be verified. Make sure the system controller is transmitting and is not in Quiet Mode.

Important Note: Clocks should be installed within 24 hours of installing the system controller. After 24 hours, the system controller will enter Quiet Mode. Pressing 3-5-7 on the keypad will disable Quiet Mode for 6 hours. Reference Appendix J in the SiteSync IQ Installation and Operation Manual for more details on Quiet Mode.

QUICK START INSTALLATION GUIDE

SITESYNC IQ® WIRELESS CLOCK SYSTEM

Unpack the box

1. Remove the components and system controller from the box. Save the packing materials in case you need them later.

Check the components

Your system kit comes with:

- System Controller
- Premium GPS receiver with 50' cable & mounting kit (A)
- Power supply (B)
- Magnetic mount TX antenna with 12' cable (C)
- Installation and Operation Manual

Choose your location

 Choose a location for the GPS receiver outside with a clear view of the sky. The included mounting bracket allows for mounting on the side of a building or other structure. The included set of u-bolts can be used to attach the bracket and GPS receiver to a mast.

Avoid high voltage equipment and excessive roof overhang when choosing a location.

 Choose a location for your magnetic mount TX antenna either outside or inside at the highest central location in your facility.

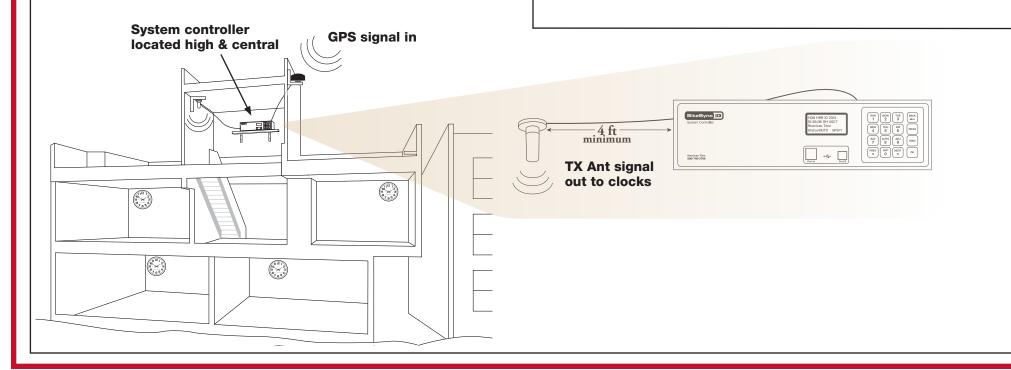

The TX antenna must be located at least 4' away from the system controller and must always point up or down, never horizontal! The cable length cannot be extended.

Connect cables to the system controller

- A. Connect the GPS antenna to the PREM GPS port.
- **B.** Connect the Sysem Controller power supply to the POWER INPUT port.
- **C.** Connect the magnet mount TX antenna to the TX ANT port. Plug 110v cord into power source. Turn the POWER SWITCH on the back of the system controller to the on position.

Note: If your system controller supports more than one time sync option, refer to the SiteSync IQ Installation & Operation Manual for detailed instructions.

Use the Setup Wizard

- 1. Press (sun to start the Setup Wizard (Page 9 in Installation Manual)
- 2. Create a 4 digit **User Lock** or enter 0000 to disable this feature. Press Tip: Record this password.
- 3. Create a 4 digit **Service Lock** (for advanced features) or enter 0000 to disable this feature. Press (ox).

Tip: Record this password. _____

4. Select local time zone by using the PREV NEXT | NEXT |

USET=Eastern USCT=Central USMT=Mountain USPT=Pacific **Note:** There are 40 options to choose from.

- Press (AUTO) 8 to select automatic DST (Daylight Saving Time) or (OFF) to disable DST if your location doesn't observe DST.
 Press (OK)
- 6. Press sun for 12-hour mode AM/PM (1:00PM). Note: Screen will advance immediately
- 7. To confirm proper set up, press [NUTO] to sync.
 - If successful, "GPS Sync Successful" will display
 - If not successful, "GPS Sync Failed" will display. Re-try by pressing again.
- 8. "Setup Wizard Successfully Completed" will display.

The system controller now shows the correct time and date. You will no longer be prompted on power-up for setup information.

9. **Verify the unit is transmitting.** TX should display for about three seconds every 30 seconds (approximately the top and bottom of every minute) in the bottom right corner of the screen.
