### GENERAL

American Time® guards are designed to protect your equipment from inadvertent damage while maintaining optimum visibility. ATS stocks a wide variety of shapes and sizes for immediate delivery to you. Open face guards can be used for many applications. Protect pull stations, telephones, digital clocks, light switches, motion detectors and more. The larger opening in the middle allows easy access to the equipment underneath and an unobstructed view of digital clock readouts. Measurements are inside dimensions.

### DESCRIPTION

Zinc guards are plated and clear coated and colors are painted for corrosion resistance and optimal appearance. The finish on the guards is designed for protection wherever they are used, inside or outside. Some of the guards are hinged for easy access to the product after attachment to the wall. Mounting hinges can be added to all our guards for an additional cost. Call our customer service representatives for pricing. AT guards are manufactured with #3 gauge (approx. .243" diameter), #6 gauge (approx. .192" diameter) or #8 gauge (approx. .162" diameter) wire material. Guards have welded tabs with mounting holes (designed to accept .250" diameter fastening lags, bolts or screws) for easy installation.
