

Pull Station/Fire Alarm Guards

FEATURES

- Heavy duty metal construction
- Multiple depths
- Easy to install
- Durable powder coat finish
- High-visibility red color
- Hinged for easy access

GENERAL

These **American Time**® guards are designed to protect your fire pull stations from accidental activation or damage. These units can be used in gyms, auditoriums, lunchrooms and other active, high traffic areas within your facility. The hinge design allows for easy accessibility to the pull station in case of emergencies or for testing. This unit is heavy enough to protect your pull station from the impact of various objects, like basketballs, volleyballs or tennis balls.

DESCRIPTION

These guards come in two sizes and are manufactured within the American Time facility. To achieve the highest level of protection for the customer's products, they are constructed of 20 gauge (.034" thick) steel. The guard perforations are stamped with automated computer controlled equipment for accuracy and then formed on dedicated dies to ensure specification compliance. After manufacturing, the guards are coated with a durable red powder coat finish for maximum visibility. The guards use a hinge that has two .187" diameter holes for mounting fasteners (mounting screws and anchors are not included). This guard will also serve as a dual action addition to pull stations.

ORDERING INFORMATION

Part #	Size
CFG101	5 1/4" h x 4 1/4" w x 1 1/2" deep
CFG102	5 1/4" h x 4 1/4" w x 3" deep

Dimensions are for back opening.
