DESCRIPTION

Power over Ethernet (PoE) is a recognized standard (IEEE802.3af) for delivering power over an Ethernet cable. PoE uses a single CAT5 or higher Ethernet patch cable to provide both power and synchronization signals, which saves on installation costs and maintenance. Clocks are provisioned and monitored through the inCloud Management Portal and setup app (Android OS). It is recommended that an un-interruptible Power Supply (UPS) be part of the Ethernet network system to maintain clock function during a power outage.
