

Battery Booster Pack Kit with Barrel Jack

FEATURES

- Uses 6 new AA lithium batteries
- Life expectancy of 5+ years
- Has mounting tabs to easily replace packs
- One Year Warranty

SPECIFICATIONS

Electrical Requirements:

- Units require 6 AA lithium batteries for battery operated clocks
- Units provide 1.5 DC operating volts

GENERAL

A battery-operated clock typically requires a new battery every year. The Battery Booster holds six AA batteries in parallel. To achieve the greatest product life expectancy, batteries must be of the same chemistry and construction to be able to operate in parallel. When initially installing new batteries in the Battery Booster, it is recommended that all batteries be from the same sealed package and installed at the same time. The environment that the Battery Booster is used in can affect the life of the batteries. Extreme temperature variation can impact the life of the batteries. The power plug has a barrel jack for a connector.

DESCRIPTION

The Battery Booster pack has a compact design to fit within the recessed backs of most clocks. The pack is made of black molded plastic with a detachable cover for battery compartment access. The power plug that goes into the battery compartment is attached to the battery pack with wires that are 8.5" long for extended reach. The battery pack has mounting tabs that install onto studs on the back of the clock it will power.
