

Power over Ethernet (PoE) clocks connect to your local network to pull time from an Internet time server. They provide a plug-and-play experience for easy installation anywhere you can run an Ethernet cable from a powered switch.

Quality construction and precision engineering means that maintenance staff won't have to spend time fixing clocks. Keep events on time and get better productivity with all clocks, computers, phones and devices displaying the same time.

PoE clocks are perfect for...

- Any business, school or organization
- Any facility that needs accurate clocks but doesn't want to purchase a system controller.

HANG THEM AND FORGET ABOUT THEM

Forget about changing batteries or manually setting time. PoE clocks automatically synchronize with your network's time source, ensuring precise, self-correcting accuracy.

KEEP EVERYONE ON THE SAME, PRECISE TIME

Across a building or campus, keep meetings, classes, appointments and shifts flowing smoothly. No manual adjustments needed at daylight saving time changes.

NO-HASSLE, FAST INSTALLATION

All you need is a Local Area Network that operates under a powered Ethernet switch. With DHCP or static IP addressing, one cable per device is all that is needed for installation.

NO MASTER CLOCK, OR EXTRA EQUIPMENT NEEDED

Whether you need one clock or many, PoE clocks synchronize independently with your network to maintain accurate time to within one second of the SNTP server.

ANALOG POE CLOCKS

- A variety of mounting options
- A variety of case, style and size options
- Quality construction, durable materials
- Add an image, name or logo to promote your brand!
- Glass crystal (12" round) or shatter-resistant polycarbonate crystal (12" square and 15" round)
- Compatible with the inCloud portal

DIGITAL POE CLOCKS

- 12 or 24-hour time display
- Anodized aluminum frame available in black or white cases
- 2.5" or 4" digit height, green or red in LED color
- 4-digit or 6-digit clock varieties
- Adjustable brightness settings; up to 200 feet visibility
- Add Timer Control Station for any 6-digit clock with optional elapsed time indicator/Code Blue activation
- Signaling buzzer options
- Date display options
